

Table of Contents.

- Acknowledgement
- 1 Introduction- basics
 - 1.1 Delphi programming basics
 - 1.2 RS232 basics
 - 1.3 USB basics
 - 1.4 USB RS232 serial and parallel bridges
 - 1.5 PIC's and their ability to communicate using onboard UART and software 'bit-bang'
 - 1.6 Terminal emulation
- 2 Delphi basics.Introduction to virtual instrumentation
 - 2.1 A simple virtual thermometer
 - 2.2 Abacus virtual components
 - 2.3 Virtual flashing LED
 - 2.4 Delphi Tcolorbutton
- 3 VCP USB communications
 - 3.1 Installing FTDI VCP drivers
 - 3.2 RS232 connectors
 - 3.3 Portcontroller Active X control
 - 3.4 Case study VCP DS75 virtual digital and analogue thermometer
- 4 DLL USB communications
 - 4.1 Installing FTDI's DLL driver
 - 4.2 Case Study DLL LED test board
 - 4.3 Simple DAC for 0-5 volt output
 - 4.4 Delphi VI slider control panel for test board
 - 4.5 Delphi VI button control panel for test board
 - 4.6 Delphi VI control panel for LED test board
 - 4.7 Delphi VI gauge for PICKIT 2 44 pin microchip demo board
- 5 Case study joystick controlled mouse
 - 5.1 The FTDI mini-B UB232R module and Schematic
 - 5.2 Installing the joystick mouse
 - 5.3 Software description

- 6 Case study simple Digital storage oscilloscope
 - 6.1 Virtual instrument digital oscilloscope
 - 6.2 A Delphi Lambda tester

- 7 Case study Virtual Compass
 - 7.1 The compass hardware
 - 7.2 The compass PC software
 - 7.3 Operating the Compass
 - 7.4 Testing the Compass

- 8 Case study FFT audio frequency analyser
 - 8.1 FFT Simulator
 - 8.2 FFT with ADC and serial output
 - 8.3 Virtual spectrum display

- 9 Delphi virtual component suppliers
 - 9.1 GMS Active X components
 - 9.2 SDL Delphi virtual components
 - 9.3 Uniworks virtual components
 - 9.4 TMS Instrument workshop
 - 9.5 IOCOMP virtual instrument components
 - 9.6 CST software virtual components

- 10 Appendix
 - unit D2XXUnit
 - unit PORTCONTROLLERMODLib_TLB

- 10.1 References
- 10.2 Index
